

EXPERIENCE THE EXCEPTIONAL

## Mechanical Seal Support Systems Service / Exchange Programme

Pressurised Mechanical seal support systems require periodic inspection and maintenance in order for the operators to comply with the Pressure System Safety Regulations 2000 (PSSR) and to ensure ongoing site maintenance and safety standards. AESSEAL® offers a comprehensive service / exchange programme that ensures the seal support system, including pressure vessel and associated system components, remains safe for continued operation, assisting you with your obligations under the Pressure System Safety Regulations

Replacement seal support system (where appropriate), minimising downtime. ✓

Vessels are fully examined both internally and externally for damage and corrosion and subject to a 'proof' hydrostatic pressure test. ✓

Seal support systems are thoroughly inspected, all component parts are checked to ensure they operate correctly and the system hydrostatically leak tested. ✓

Replacement of consumables and minor fittings are included as standard. ✓

Where appropriate, recommendations for replacement of major components and instrumentation are made. ✓

Feature	Benefits
Original equipment manufacturer service / exchange	Peace of mind. Helping users to comply with the requirements of the Pressure System Safety Regulations 2000 (PSSR).
Improved seal reliability	Continued efficient seal support system operation maximises mechanical seal life.
Minimise Downtime	Replacement systems as part of an ongoing service / exchange programme (where appropriate).
Tailor made plans	Meeting your own site specific requirements.
