

## UK pulp and paper mill upgrade lip seals for bearing protection

Following a series of issues within a pulp and paper mill caused by the use of lip seals, AESSEAL® was called in to help.

The mill was experiencing problems with gearboxes for their refiners with failures every 3 to 4 months costing them around £1600 each time. Following a consultation with AESSEAL, a 170 mm standard LabTecta design was installed in January of 2006 and has been running since.

### “No more gearbox failures”

Industry:	Pulp & Paper
Product:	LabTecta
Application:	Refiner gearbox
Country:	UK
Reference no:	3262
