

ENVIRONMENTAL TECHNOLOGY

A £40,000 repair saving over 10 years

A UK based food processing plant was having major water ingress through the vertical shaft on their cold room gearbox. This water ingress was causing the gearbox to come out of service every 6 months severely impacting on production.

AESSEAL® replaced the lipseal on the gearbox with a LabTecta®66 top entry bearing protector. The patented dynamic lift technology of the LabTecta®66 ensures the equipment can breathe when rotating, but when the equipment is stationary a perfect seal is formed that prevents water and particle contamination.

After 10 years of service the LabTecta®66-TE, has been changed out twice not due to failure but as a standard overhaul procedure, and has saved over £14,000 per installation and over £40,000 in 10 years.

‘£14,000 saving per installation & no failures’

Industry:	Food & Beverage
Product:	LabTecta®66-TE
Savings:	£40,000 (and counting)
Reference N.O:	3292N
