

## Company praises AESSEAL® design

An Indian pump manufacturer decided to work with AESSEAL® to develop reliable cartridge dual-balanced seals for use in pumps working with epoxy resin and abrasive paste. They were not satisfied with the reliability of the pumps from their existing seal vendor, and were keen to work with a new supplier.

In September 2020 AESSEAL® provided the company with a 40 mm FI-CDP-IC Seal, a dual-balanced rotary design multi-spring true cartridge seal. This was developed after a thorough analysis, and was approved by the customer in the face of strong competition.

The company was happy with AESSEAL's product design, particularly since it was able to reduce inventory because the single design served multiple applications. It was also impressed with the timely response to all queries, and the smooth first order execution. AESSEAL® was subsequently given a further order for more than 50 seals.

## 'Single design serves multiple applications'

Industry:	OEM
Product:	FI-CDP-IC™
Application:	Pumps
Savings:	Reduced inventory
Reference N.O:	CS0152
