

AESSEAL® recognises the importance of energy efficiency and takes a holistic view of the impact of its activities in terms of the economical use of energy resources or the elimination of waste use of energy resources.

We are committed to the implementation of an Energy Management System in accordance and compliance with ISO 50001 that is appropriate to the energy use and consumption in the context of the Company and in particular seeks to:

- Satisfy all applicable legal & other requirements relating to energy.
- Continually improve overall energy performance and endeavour to improve energy efficiency wherever possible.
- Comply with applicable legal & other requirements relating to energy.
- Provide the resources necessary to ensure energy data is available and enable objectives and targets to be achieved.
- Consider energy performance opportunities in the design of new facilities, renovations of existing facilities or the introduction of new processes where there are significant energy uses.
- Consider energy efficiency during specification and procurement of significant energy using equipment.

AESSEAL® designs, manufactures and repairs a range of mechanical seals

And seal support systems which help customers meet their environmental and safety obligation, in addition to helping them reduce their energy and water consumption.

This policy is available to be viewed by all employees via the Company's Integrated Management System (Q-SEAL) The Manual describes the management system used to set objectives and control, review and improve energy performance and is implemented via procedures, work instructions and/or training, as appropriate. The policy manual, together with current objectives will be made available to interested parties on request. This policy will also be reviewed on an annual basis as part of the management review process but will only be updated when necessary.
