

AESSEAL® manufactures a range of mechanical seals designed to help customers meet their environmental and safety obligations by preventing leakage of fluids and gases from rotating equipment, The Company's manufacturing activities are supported by a refurbishment service for mechanical seals and pumps.

The Company recognises the importance of environmental issues and takes a holistic view of the impact of its activities on the environment.

AESSEAL® is committed to the implementation of an Environmental Management System in accordance with BS EN ISO 14001 that identifies and addresses the main environmental impacts of the Company's activities and in particular seeks to:

- Meet all applicable environmental legal and other requirements.
- Prevent pollution arising from its activities, products and services.
- Continually improve overall environmental performance with regard to its activities, products and services.
- Provide adequate resources to achieve the above.

The Company's Quality, Health & Safety, Environment, Assurance and Learning (Q-SEAL) Manual describes the management system used to set objectives and control, review and improve environmental performance and is implemented via procedures, work instructions and/or training, as appropriate. This manual, together with current environmental objectives will be made available to interested parties on request.
